The University of Exeter has been asked to provide a report on the
Carbon Emissions and associated Decarbonisation Plan for:

C J Medical Limited
Charles House
Unit B3 Walker Industrial Estate
Truro

Introduction

This report covers all relevant findings, methodologies, and
recommendations for improvement.

It is based solely on data and information provided by C J Medical
Limited, with no verification of data having taken place.

Over the following pages you will find the results associated with the calculation of Emissions of C J Medical Limited

These results are broken down into Scope 1, Scope 2 and Scope 3 (Scope 4 where appropriate).

Results are also shown by Source of Emissions.

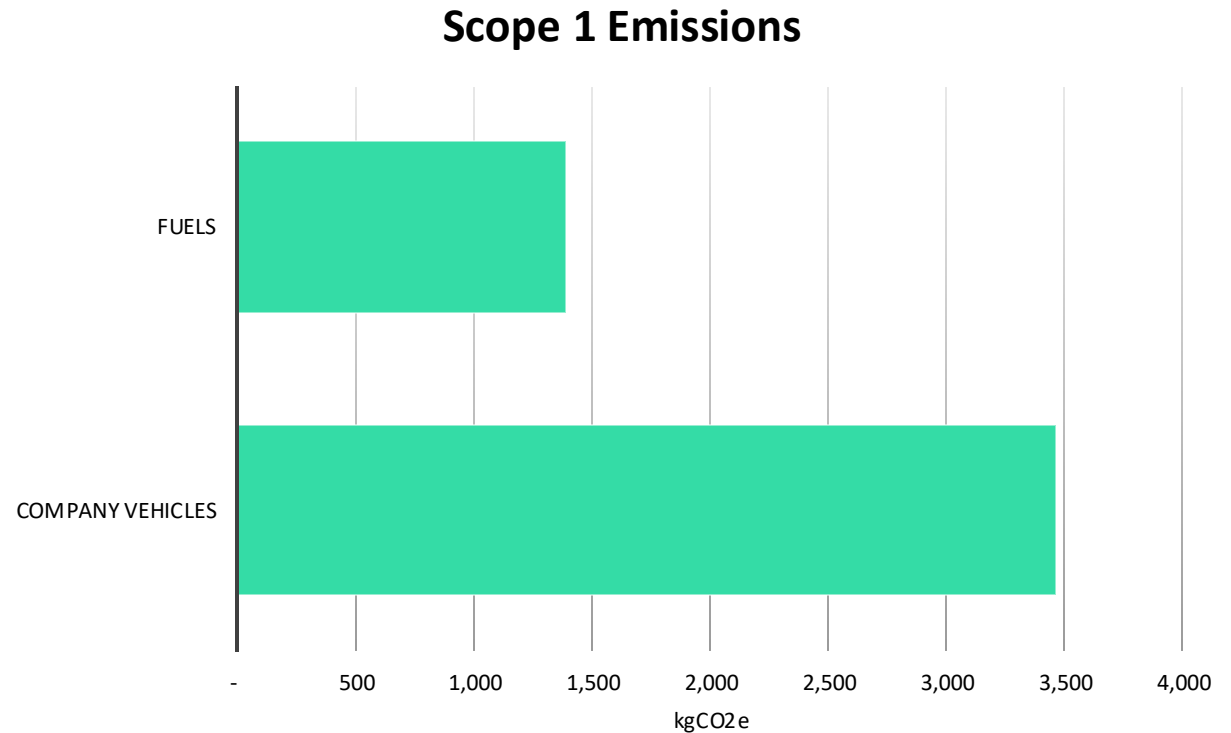

Results

Results Scope 1 (Direct Emissions)

4,861 kgCO₂e

Direct Emissions are those associated from sources owned or controlled by the Company. For instance, Company Vehicles, Gas Central Heating, Fuel Purchased etc.

All figures are in kgCO₂e.

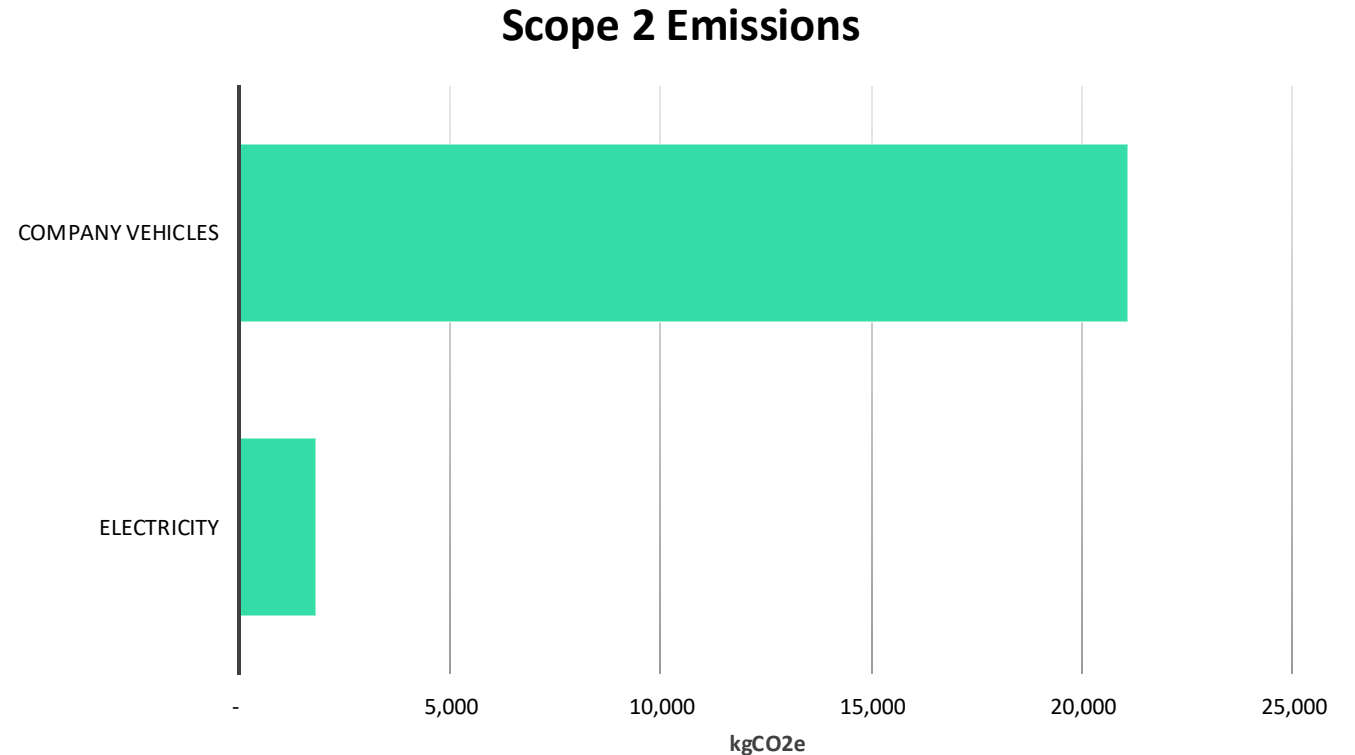

Results Scope 2 (Indirect Emissions)

22,902 kgCO₂e

Scope 2 Indirect Emissions are those associated with activities of the company. E.g. Purchased Electricity, Heat, Steam, Cooling.

All figures are in kgCO₂e.

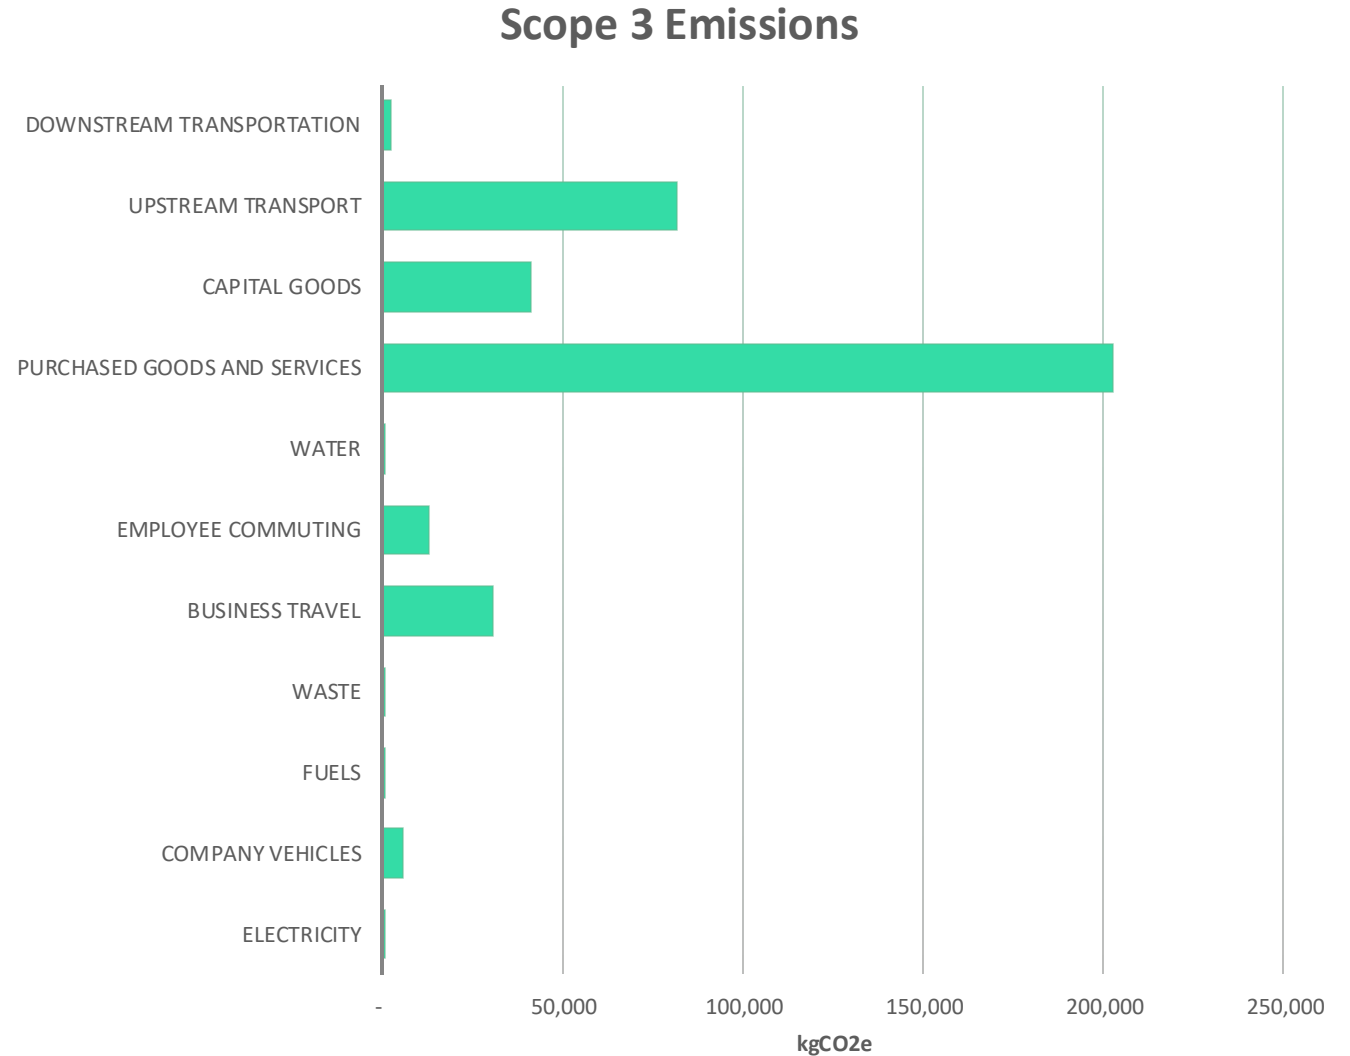

Results Scope 3 (Indirect Emissions)

377,636 kgCO₂e

Scope 3 Emissions are those associated with the company's value chain, both up and down stream. E.g. Staff Travel, Commuting, Supply Chain, Transportation of Goods etc. Some scope 1 and 2 categories such as Electricity also have related Scope 3 emissions.

All figures are in kgCO₂e.

Results Total Emissions By Scope

405,398 kgCO₂e

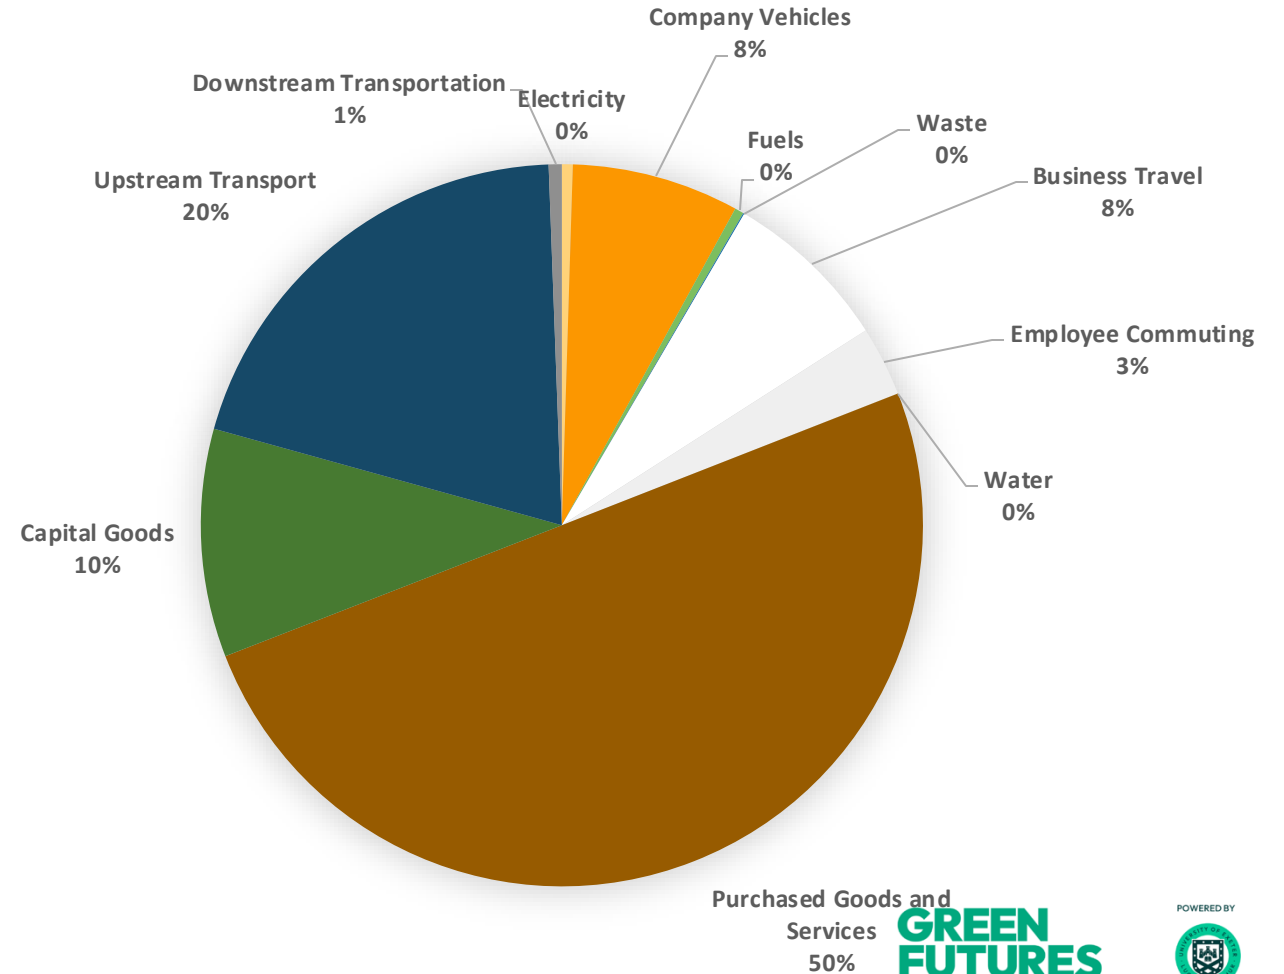

Summary of all Total Emissions by Scope.

All figures are in kgCO₂e.

Results
Total Emissions
By Scope

405,398 kgCO₂e

Emissions (kgCO₂e) by Category

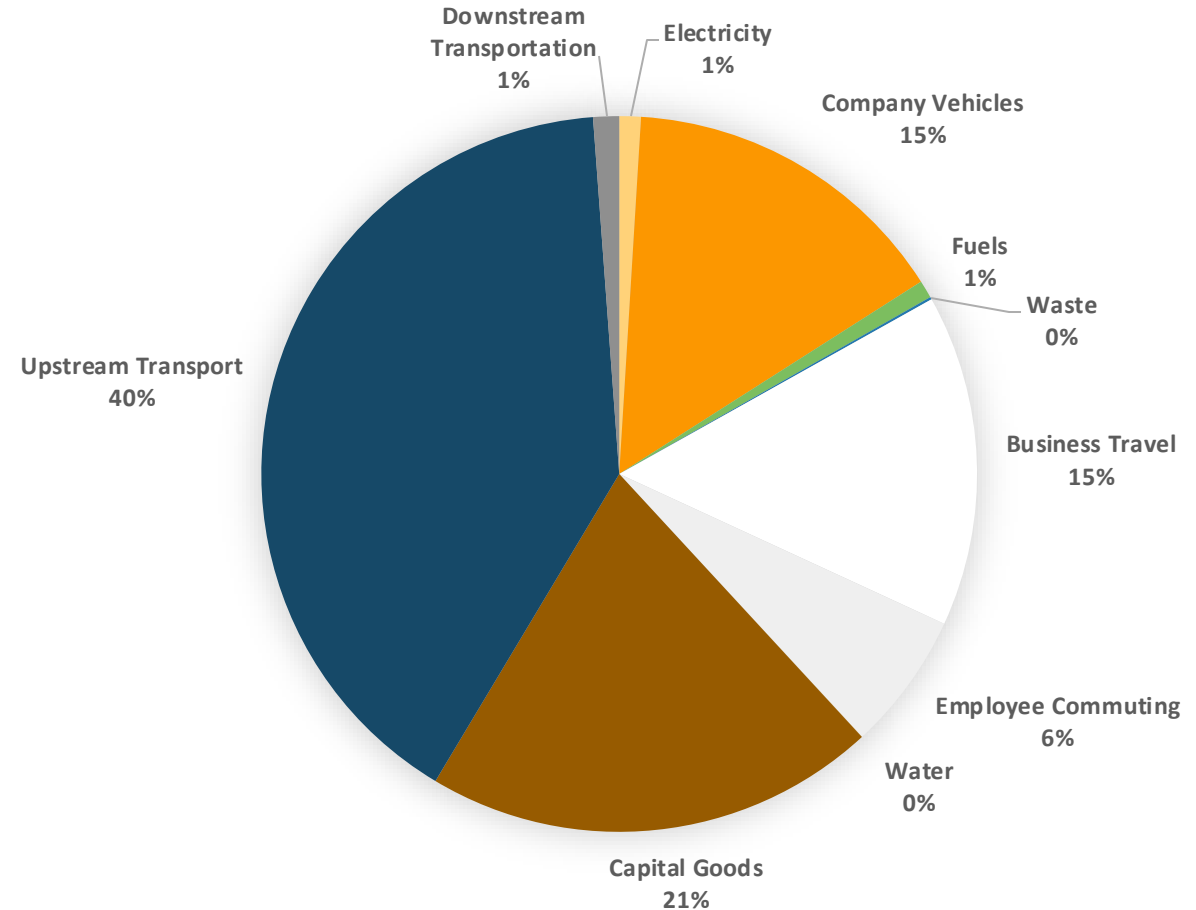

Purchased Goods and
Services
50%

**GREEN
FUTURES
SOLUTIONS**

Results Total Emissions By Source (excl Supply Chain)

202,549 kgCO₂e

Emissions by Category, excluding Purchased Goods and Services

Emissions Report Scope

Methodology Used

This report is compliant with the GHG Protocol methodology. According to it, the reported information shall be “relevant, complete, consistent, transparent and accurate”.

Results are presented for each of the activities/processes that describe C J Medical Limited activities and are split into Scopes 1, 2 and 3, based on GHG protocol methodology.

The calculation of C J Medical Limited Scope 3 emissions is based on the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard and the Guidance for Accounting. The Scope 3 emissions are calculated by category in accordance with the guidelines of the GHG Protocol Standard.

C J Medical Limited provided data, that together with the assumptions and calculations made in this report, the GHG emissions inventory were calculated.

Emissions Report Scope

Methodology Used cont.

C J Medical Limited provided data, that together with the assumptions and calculations made in this report, the GHG emissions inventory were calculated.

This report distinguishes between C J Medical Limited organisational boundaries and operational boundaries.

“Operational Control Methodology” has been applied, meaning we endeavour to include all emissions over which C J Medical Limited have Operational Control. Additionally, a location-based approach has been used.

All Emissions are recorded in kg CO₂e (kilograms of Carbon Dioxide equivalent gases).

Emissions Report Scope

Organisational Boundary

Currently C J Medical Limited has no Subsidiaries nor Parent Companies to be concerned with so the Organisational Boundary is defined as solely the organisation C J Medical Limited

Operational Boundary

For the purposes of this Carbon Footprint, we are including Scope 1, Scope 2 and Scope 3. We have excluded Category 15 (Investments) due to insufficient data being available.

Areas included are:

Scope 1 – Direct Emissions

Scope 2 – Indirect Emissions

Scope 3 – Other Indirect Emissions including Value Chain

Base Year

This report covers the reporting period 01/04/23 – 31/03/24

Collection/Quality of Data

Data has been collected direct from C J Medical Limited . Currently none of the data has been externally verified for accuracy. Where accurate data has been unavailable, estimates have been used.

Emissions Report Scope

Emissions Report Scope

Emissions Factors

This report uses a mixture of Emissions Factors. Most notably these are the “UK Government Conversion Factors for Company Reporting 2023” and the “2019 DEFRA UK Footprint Results”. If necessary, additional Emissions Factors may have been used. Full Emissions Factors can be found in the Data Workbook that accompanies this report
